

AI STUDYBUDDY

Phase 1 – User Authentication

The first phase of AI StudyBuddy focuses on secure user authentication. Users can create a new account by providing their basic details and can log in using their registered credentials. The authentication module ensures that only authorized users can access the StudyBuddy application. User account information is stored securely in the database. After successful login, the user is redirected to the main StudyBuddy interface. This phase provides the basic security and personalized access required for the remaining features of the project.

Key Features

- User Registration
- User Login
- Credential Validation
- Secure User Data
- Personalized Access

PHASE FLOW	User Registration → User Login → Credential Validation → Secure User Data → Personalized Access
------------	---

Purpose: To complete Phase 1 of the AI StudyBuddy system and support a simple, secure, and student-friendly learning workflow.
